

Jenny Bridges

QASDG External Expert

As a dual qualified radiographer, I have gained experience in both the diagnosis and treatment of breast cancer and have obtained my Master's degree covering both disciplines. During my radiotherapy career I was involved with many innovations in practice with the introduction of multileaf collimation, digital on-treatment imaging and evolution and standardisation of treatment protocols.

To the current date, I have been working in breast screening for 16 years including the training of radiographers and assistant practitioners to provide an efficient, high standard service to a local population of approaching 250,000 ladies.

In partnership with a colleague, we oversaw the transition of our service from analogue to digital imaging technologies, integrating all modalities to a new build PACS, setting up display protocols, training of all staff and management the live system on a daily basis.

In my current role, I am involved with all aspects of quality assurance of our service, from frontline client interactions, consistency and standards of screening, assessment and diagnostic images to the timely provision of results. This includes ensuring equipment performance with testing in association with local and regional medical physics.
